this text is a modern vector oriented treatment of classical dynamics and its application to engineering problems based on ginsberg s advanced engineering dynamics 2nd edition it develops a broad spectrum of kinematical concepts which provide the framework for formulations of kinetics principles following the newton euler and analytical approaches this fresh treatment features many expanded and new derivations with an emphasis on both breadth and depth and a focus on making the subject accessible to individuals from a broad range of backgrounds numerous examples implement a consistent pedagogical structure many new homework problems were added and their variety increased

the first of two books concentrating on the dynamics of slender bodies within or containing axial

flow fluid structure interaction volume 1 covers the fundamentals and mechanisms giving rise to flow induced vibration with a particular focus on the challenges associated with pipes conveying fluid this volume has been thoroughly updated to reference the latest developments in the field with a continued emphasis on the understanding of dynamical behaviour and analytical methods needed to provide long term solutions and validate the latest computational methods and codes in this edition chapter 7 from volume 2 has also been moved to volume 1 meaning that volume 1 now mainly treats the dynamics of systems subjected to internal flow whereas in volume 2 the axial flow is in most cases external to the flow or annular provides an in depth review of an extensive range of fluid structure interaction topics with detailed real world examples and thorough referencing throughout for additional detail organized by structure and problem type allowing you to dip into the sections that are relevant to the particular problem you are facing with numerous appendices containing the equations relevant to specific problems supports development of long term solutions by focusing on the fundamentals and mechanisms needed to understand underlying causes and operating conditions under which apparent solutions might not prove effective
